FAN FILTER UNIT INFORMATION

CAM2250 CLEAN AIR MODULE

Utilising H14 HEPA filters, rated at 99.997% efficient at 0.3 microns, the Monmouth CAM2250 provides up to 2250m³ of ultra clean air per hour.

Air is initially drawn through a deep pleated pre-filter which retains particulate ≥ 0.5 microns, helping to protect the main HEPA from unnecessary work and increasing its lifespan. This combination ensures the CAM2250 provides better than Class 100 (ISO Class 5) clean air directly below the filter surface.

To alert the user to maintenance requirements, the CAM2250 is fitted with a low-airflow sensor that will offer both audible and visual alarms should the operation parameters not be met.

MODULE CONTROL

The CAM2250 system is provided with a wired remote-control panel, which controls the power to the main unit and an unlimited number of connected subsequent slave units. Also controlled are the lighting units and the low airflow alarm that alerts the user to any maintenance requirements.

CAM1000 CLEAN AIR MODULE

Utilising H14 HEPA filters, rated at 99.997% efficient at 0.3 microns, the Monmouth CAM1000 provides up to 1000m³ of ultra clean air per hour.

Air is initially drawn through a deep pleated pre-filter which retains particulate ≥ 0.5 microns, helping to protect the main HEPA from unnecessary work and increasing its lifespan. This combination ensures the CAM1000 provides better than Class 100 (ISO Class 5) clean air directly below the filter surface.

The system is provided with a wired remote-control panel, which controls the power to both the main unit and the lights.
